

# Technical Note - SmartPAC Pro without an SD Card

Newer SmartPAC Pro units now operate without an SD card. Instead, they use an internal drive built directly into the System on Module (SOM) to store memory such as Tool data.

While the SD card slot is still physically present, it will not function with the newer SOMs that have a black heatsink (see Figure 1).

## NOTICE

Pros produced without an SD card have its serial number label adhered to the SD card slot below the SOM. Although the slot is electronically intact, it will not function with SOMs that have the black colored heat sink.

Figure 1. SmartPAC Pro HMI board showing the SOM with a black heatsink and no SD card

Note that any mention of "SD Card" either within the product manual or the Pro's UI, should be implied as referring to the internal media of the SOM.

## Backups are important!

SmartPAC Pro units with this style SOM include the USB Backup/Restore option. Regular backups are strongly recommended especially since there is no SD card to transfer Tools etc. if service is needed.
